

Out-Patient Suspicion of Pre Eclampsia (PET):

Note:

This is guideline should be regarded as additional to local hypertension/ preeclampsia guidelines and should not replace it.

sFlt/PIGF ratio DOES NOT predict hypertension which may be life threatening in absence of pre eclampsia: local/ national hypertension guidelines should be followed.

Ultrasound and steroids should be considered as per local guideline

*as per ISSHP criteria (creatinine >90 umol/L; elevated transaminases (2x normal) +/- severe RUQ/ epigastric pain; eclampsia, altered mental status, blindness, stroke, or more commonly hyperreflexia when accompanied by clonus, severe headaches when accompanied by hyperreflexia, persistent visual scotomata; thrombocytopenia, DIC, haemolysis; foetal growth restriction)

Guideline developed by Drs Manu Vatish, Sofia Cerdeira and Lawrence Impey
